

The Best of Every Season

Julia Jane Boxwood*
Buxus microphylla 'Julia Jane'

Height: 5 feet

Spread: 5 feet

Sunlight: ☉ ●

Hardiness Zone: 4

Other Names: Littleleaf Box, Japanese Boxwood

Description:

This slow growing, broadly rounded shrub is great for smaller areas; emerging lime green foliage turns deep green, then develops coppery tones in late fall and winter; an extremely versatile shrub that takes pruning exceptionally well

Ornamental Features

Julia Jane Boxwood has dark green foliage which emerges lime green in spring. The small glossy oval leaves turn coppery-bronze in fall. Neither the flowers nor the fruit are ornamentally significant.

Landscape Attributes

Julia Jane Boxwood is a dense multi-stemmed evergreen shrub with a more or less rounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

This is a relatively low maintenance shrub, and can be pruned at anytime. It is a good choice for attracting bees to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Julia Jane Boxwood is recommended for the following landscape applications;

Planting & Growing

Julia Jane Boxwood will grow to be about 5 feet tall at maturity, with a spread of 5 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. This is a selected variety of a species not originally from North America.

Julia Jane Boxwood makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
