

*The Best of Every Season*

**Golden Sun Peach\***  
*Prunus persica 'Golden Sun'*

Height: 15 feet

Spread: 20 feet

Sunlight: ☉

Hardiness Zone: 5

Other Names: Common Peach

**Description:**

A fine yet fickle fruit tree, bearing firm, juicy golden peaches in mid summer; quite ornamental, with showy pink flowers in spring and a low, spreading habit; susceptible to late spring freezes and disease, needs full sun and well-drained soil

**Edible Qualities**

Golden Sun Peach is a small tree that is commonly grown for its edible qualities. It produces gold round fruit (technically 'drupes') with a red blush and yellow flesh which are usually ready for picking in mid summer. Note that the fruits have hard inedible pits inside which must be removed before eating or processing. The fruits have a sweet taste and a juicy texture.

The fruit are most often used in the following ways:

- Fresh Eating
- Cooking
- Baking
- Preserves
- Canning

**Features & Attributes**

Golden Sun Peach is smothered in stunning clusters of fragrant pink flowers along the branches in early spring, which emerge from distinctive rose flower buds before the leaves. It has dark green foliage throughout the season. The narrow leaves turn yellow in fall. The fruits are showy gold drupes with a red blush, which are carried in abundance in mid summer. The fruit can be messy if allowed to drop on the lawn or walkways, and may require occasional clean-up.

## *The Best of Every Season*

This is a deciduous tree with a more or less rounded form. Its average texture blends into the landscape, but can be balanced by one or two finer or coarser trees or shrubs for an effective composition. This plant will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Messy
- Insects
- Disease

Aside from its primary use as an edible, Golden Sun Peach is suitable for the following landscape applications;

- Accent
- Shade
- Orchard/Edible Landscaping

### **Planting & Growing**

Golden Sun Peach will grow to be about 15 feet tall at maturity, with a spread of 20 feet. It has a low canopy with a typical clearance of 3 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 40 years or more. While it is considered to be somewhat self-pollinating, it tends to set heavier quantities of fruit with a different variety of the same species growing nearby.

This tree is typically grown in a designated area of the yard because of its mature size and spread. It should only be grown in full sunlight. It does best in average to evenly moist conditions, but will not tolerate standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments, and will benefit from being planted in a relatively sheltered location. This is a selected variety of a species not originally from North America.
