

*The Best of Every Season*

**Golden Sands Falsecypress\***  
*Chamaecyparis pisifera 'Golden Sands'*

Height: 12 feet

Spread: 8 feet

Sunlight: ☉ ●

Hardiness Zone: 4

Other Names: Japanese Falsecypress, Sawara Falsecypress

**Description:**

A variety of threadleaf falsecypress with fine, almost string-like brilliant yellow-green foliage speckled with white, giving an extremely fine texture; ideal for color and texture contrast in the garden; grows very slowly

**Ornamental Features**

Golden Sands Falsecypress has attractive white-variegated chartreuse foliage which emerges yellow in spring. The threadlike leaves are highly ornamental and remain chartreuse throughout the winter. Neither the flowers nor the fruit are ornamentally significant.

**Landscape Attributes**

Golden Sands Falsecypress is a dense multi-stemmed evergreen shrub with an upright spreading habit of growth. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This is a relatively low maintenance shrub. When pruning is necessary, it is recommended to only trim back the new growth of the current season, other than to remove any dieback. It has no significant negative characteristics.

Golden Sands Falsecypress is recommended for the following landscape applications;

- Accent
- General Garden Use
- Container Planting

### **Planting & Growing**

Golden Sands Falsecypress will grow to be about 12 feet tall at maturity, with a spread of 8 feet. It has a low canopy with a typical clearance of 2 feet from the ground, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for 70 years or more.

This shrub does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type, but has a definite preference for acidic soils. It is highly tolerant of urban pollution and will even thrive in inner city environments. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selected variety of a species not originally from North America.

Golden Sands Falsecypress makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Its large size and upright habit of growth lend it for use as a solitary accent, or in a composition surrounded by smaller plants around the base and those that spill over the edges. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
