

*The Best of Every Season*

**Cloudbank Ginny Conebush\***  
*Leucadendron 'Cloudbank Ginny'*

Height: 6 feet

Spread: 6 feet

Sunlight: ☉

Hardiness Zone: 8

Other Names: Cloudbank Jenny

**Description:**

This flowering shrub, in the Protea family, has amazing bright yellow bracts with a prominent red cone in the center; both the leaves and the bracts glow with red tips; interesting, twisted stems are great for ikebana; avoid phosphorus fertilizers

**Ornamental Features**

Cloudbank Ginny Conebush features showy gold daisy flowers with ruby-red eyes and red tips at the ends of the branches in early spring. The flowers are excellent for cutting. It has attractive grayish green foliage edged in red. The oval leaves are highly ornamental and turn an outstanding red in the fall. The fruit is not ornamentally significant.

**Landscape Attributes**

Cloudbank Ginny Conebush is a multi-stemmed evergreen shrub with a more or less rounded form. Its relatively fine texture sets it apart from other landscape plants with less refined foliage.

## *The Best of Every Season*

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Cloudbank Ginny Conebush is recommended for the following landscape applications;

- Mass Planting
- Hedges/Screening
- General Garden Use
- Container Planting

### **Planting & Growing**

Cloudbank Ginny Conebush will grow to be about 6 feet tall at maturity, with a spread of 6 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front, and is suitable for planting under power lines. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub should only be grown in full sunlight. It prefers dry to average moisture levels with very well-drained soil, and will often die in standing water. It is considered to be drought-tolerant, and thus makes an ideal choice for xeriscaping or the moisture-conserving landscape. It is particular about its soil conditions, with a strong preference for poor, alkaline soils. It is somewhat tolerant of urban pollution. This particular variety is an interspecific hybrid.

Cloudbank Ginny Conebush makes a fine choice for the outdoor landscape, but it is also well-suited for use in outdoor pots and containers. Because of its height, it is often used as a 'thriller' in the 'spiller-thriller-filler' container combination; plant it near the center of the pot, surrounded by smaller plants and those that spill over the edges. Note that when grown in a container, it may not perform exactly as indicated on the tag - this is to be expected. Also note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, this plant may be too tender to survive the winter if left outdoors in a container. Contact our store for more information on how to protect it over the winter months.
